

## *Order of Operations*

Make the largest expression by using the whole numbers 0-9 in the boxes below.

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

Make the smallest expression by using the whole numbers 0-9 in the boxes below.

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$

$$\square \div \square (\square + \square)^{\square} \cdot \square - \square$$
